

A Better Way to Generate Purchase Orders from Sales Orders with Microsoft Dynamics SL

Imagine having the ability to efficiently and reliably generate purchase orders with the touch of a button. AutoPOg™ delivers this reality to you. By pushing a single button on the Microsoft Dynamics® SL Sales Order screen, AutoPOg will generate Purchase Orders for everything on the order, including non-stock items.

This application can save your organization hours of data entry time.

Features:

- Seamless integration with Dynamics SL Order Management & Purchasing
- Automatic generation of purchase orders from sales orders in Order Management
- Automate AutoPOg as an order step to have purchase orders created without any user interaction
- Override default vendors on the order to source items from alternate vendor
- Consolidated items for each vendor on a single purchase order
- Support for Drop Ship Purchase Orders, Regular Purchase Orders, Goods for Inventory, Goods for Drop Ship, and Goods for Project.
- Direct Drill down from sales order to linked purchase orders
- Support for Non-stock items

AutoPOg streamlines the process of creating purchase orders from sales orders

Customers using this product have seen an incredible reduction in time to create purchase orders. One customer has their daily time spent creating purchase orders decreased from four hours to fifteen minutes (*a time savings of 3 hours and 45 minutes per day*). **Now that is real dollar savings!**

Using the information from the sales order, AutoPOg will determine what items to order and create purchase orders for each vendor specified for the items. It will consolidate vendor's products into one purchase order, and will also use scheduling information to insure that the purchase order reflects the same requested dates as the sales order. If line items on the sales order are drop ship items, AutoPOg will generate a drop ship purchase order using the shipping information from the sales order.

AutoPOg

Product Type

*Visual Basic Customization
SQL Server Stored Procedures*

Technical Requirements
